

NeoMate

Emergencies, calculations, checklists

Free app for doctors and nurses looking after sick newborn babies

Created by neonatal doctors and nurses
to help in stressful situations...

Neonatal Calculator

- **Intubation** tube sizes and lengths, drugs, surfactant dosing.
- **Central lines** sizes, lengths, common infusions.
- **Dose calculators** for all common neonatal emergency drugs.
- **Infusion calculators** for common inotropes, anti-seizure medications, sedatives and cardiac drugs.
- **Fluid calculations** for maintenance fluids, including electrolytes, custom dextrose concentrations and glucose delivery calculator.
- **Oxygenation index** with regional units support.
- **Estimated weight** by gestation at birth.

Neonatal Checklists

Concise and simple tools aimed to support the skills of expert neonatal staff. Covers key areas including referral for transport, term baby in respiratory distress, extreme preterm delivery, term baby collapse, encephalopathy, suspected necrotising enterocolitis, the underventilated baby, and more.

Concise Reference Information

Quick reference for neonatal staff - information that is useful in your pocket. Topics include BAPM guidelines for extreme prematurity, cerebral function monitoring (CFM) guide, cooling criteria and more.
